

**What is Claimed is:**

1. A disk drive anchoring mechanism adopted for using on a computer casing, comprising:

5                   a plurality of fastening elements located on two opposite sides of a disk drive; a bracing board fixedly mounted on the computer casing for holding the disk drive;

at least two latch flanges located on the bracing board corresponding to the two opposite sides of the disk drive and sandwiched the disk drive therebetween through the fastening elements; and

10                  a drawing rack movably coupled with the latch flanges to confine the fastening elements to anchor the disk drive.

2. The disk drive anchoring mechanism of claim 1, wherein the fastening elements are screws which are fastened to screw holes formed on the two opposite sides of the disk drive.

15                  3. The disk drive anchoring mechanism of claim 1, wherein the latch flanges has a guiding section, the drawing rack having a guiding slot corresponding to the guiding section, the guiding slot being movable along the guiding section to allow the drawing rack to be movably coupled with the latch flanges.

20                  4. The disk drive anchoring mechanism of claim 1, wherein the latch flanges has an anchor slot, the drawing rack having an indented trough corresponding to the anchor slot and a channel slot such that the fastening element is slidable into the bottom end of the anchor slot and the channel slot through the anchor slot and the indented trough, and the drawing rack is movable through the channel slot over the fastening element to confine the fastening element at the bottom end of the anchor slot to 25 anchor the disk drive.

5. The disk drive anchoring mechanism of claim 1, wherein the latch flanges has a housing section to allow the drawing rack to be movably coupled with the latch flanges.
6. The disk drive anchoring mechanism of claim 5, wherein the latch flange has an anchor slot, the drawing rack having an open slot corresponding to the anchor slot and a channel slot connecting to the bottom end of the anchor slot such that the fastening element is slidable into the bottom ends of the anchor slot and the open slot, and the channel slot through the anchor slot and the open slot, and the drawing rack is movable through the channel slot over the fastening element to confine the fastening element at the bottom end of the anchor slot to anchor the disk drive.
